Incorrect Data Rendering in Angular Visualization #487

⊙ Open

🐙 **JSP25SCM19D** opened 19 minutes ago · edited by JSP25SCM19D   Edits ▾ ⋯

There is an issue with the rendering of data points in the Angular visualization. The displayed chart does not accurately reflect the data values, leading to a misunderstanding of the information presented. The problem may be due to incorrect handling of data attributes during initialization.

Steps to Reproduce:
Load the dataset into the Angular application.

Initialize the chart component with the data.

Check the graph for discrepancies between the displayed and actual values.

Expected Behavior:
The data should be plotted correctly according to the dataset without missing or misaligned values.

Create sub-issue ▾ 😊
